ABSTRACT:

PURPOSE: To obtain a healthy flowering stock capable of shortening the growth period from a seedling of an orchid to a parent plant by immersing a root of the orchid and cultivating in a culture solution composed of a perfluoro compound and water for the orchid.

CONSTITUTION: The growth period from a seedling of an orchid to a parent plant is shortened by immersing a root of the orchid in a culture solution composed of a perfluoro compound such as perfluorotripentylamine and water and then cultivating the orchid.
